

# EZConnect Pro

...making your delivery data flow

EZConnect Pro is revolutionizing the fleet fueling industry with a reliable and effortless way to quickly fuel trucks and equipment then transmit the fueling information wirelessly to the billing office. Eliminating the stress and hassle of manual ticket writing and posting will provide your employees the time needed to complete their daily tasks and leave you with the peace of mind your operation will run smoothly and reliably. EZConnect Pro, the ultimate fuel management system, is another integrated system to add value to your operation brought to you by Gas Equipment Company.

## Easy System Install

Fuel trucks that are currently equipped with Liquid Controls meters and LCRII's require only a few steps to set up the EZConnect Pro system. If you don't have LC products on your truck, GEC is proud to be a stocking distributor and will work with you to outfit your fueling trucks.

## Faster Deliveries

Scan and pump -- the only steps your fleet fuelers will need to do. EZConnect Pro takes care of storing, saving, and sending your delivery data from the fuelers in the field to the office for billing personnel to process.

*"We turn your delivery data into usable information, and have successfully processed 1.2 million consecutive fuel deliveries."*

– Kevin Pruitt  
Director of Integrated Systems  
Gas Equipment Company

## Procontrol and RFID Buttons

Together, the Procontrol remote and the RFID buttons identify vehicles and equipment before each fuel delivery. RFID buttons have a unique ID number that the Procontrol reads to recognize the vehicle, customer, and fuel type for the specified truck. From the fueling point, Procontrol can wirelessly read and send the information in the RFID button to the DMS inside the truck cab and signal the system to begin fueling. RFID buttons are attached to vehicles close to the fueling point where fuelers can scan the button and still open the nozzle to make a delivery. When Procontrol reads a button, the vehicle data is pulled from the EZConnect database for the delivery. Vehicle data can include product type, location, customer account, name, number, and tank size.

## GEC Delivery Software

With GEC Delivery, you can create and manage every aspect of your fleet fueling database. The GEC Delivery software is a versatile system that allows you to access and update your data for processing from DMS units in the field into useable files for billing through your third-party accounting software. Transaction data is easily converted into CSV, XML, ASCII or Excel data files that can be uploaded into third-party accounting software.

## Accurate Dispensing & Accounting of Fuel Transactions

Eliminate the hassle of handwriting and reviewing tickets. Manual ticket writing is time consuming and can result in misread or lost information. EZConnect Pro removes this obstacle and creates additional time that will lead to increased fuel deliveries.

## Continuous Support

From building the EZConnect Pro system to installation to service after the sale, you can count on our team to help you every step of the way.

*"It's simple and it works."*

– Tyler Schwantes  
 Information Systems Specialist  
 The Falkirk Mining Company

## DMS i1000 Truck Computer

The DMS i1000 is an in-cab computer with a heavy-duty lap pad interface engineered for use in the fuels industry. The DMS i1000 runs software application programs, such as EZConnect, designed for specific types of fuel delivery operations. The DMS is also equipped with two support software programs that allow users to manage files, set up LectroCount multi-register networks, and calibrate the metering system. EZConnect application software combines the metrological data from the LectroCount register with your company's operational data to produce a complete record of delivery activity. EZConnect is designed to automatically capture fueling data, reduce fueling time and errors, increase accuracy, and record all aspects of the delivery of fuel.

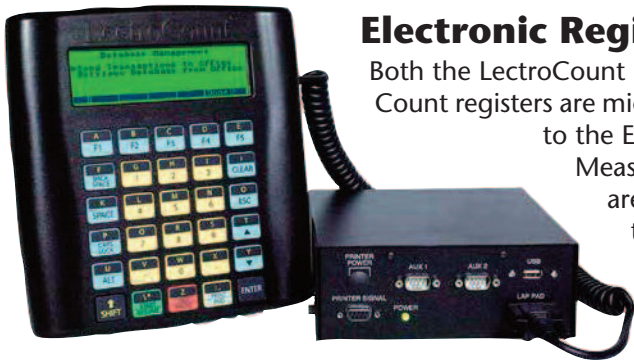

DMS EZConnect has a number of capabilities and features including: fueler security settings, vehicle identification, delivery start and stop, recording and tracking deliveries, shift reports, and data transmission to GEC Delivery via Wi-Fi or cellular modem.

*"Minimum 25-30% increase in productivity."*

– Keith Schmidt  
 Co-Owner of Schmidt & Sons Inc.  
 Fuels and Lubricant Distributor

## Electronic Registration

Both the LectroCount LCR11 and LCR 600 are compatible with the EZConnect Pro system. LectroCount registers are microprocessor-based electronic meter registers that provide metrological data to the EZConnect Pro during custody transfer. LectroCount registers are Weights & Measures approved and mounted directly onto the meter. The LCR11 and LCR 600 are available with temperature compensation to correct volume measurements to a programmable base temperature.
